Career Summary

I am a Full-Stack Software Developer with over 2 years of experience building web applications using JavaScript, React, Node.js, and PostgreSQL. Throughout my career, I have thrived under tight deadlines, collaborated closely in cross-functional teams, and actively improved system reliability through debugging, testing, and code reviews. I am also experienced in modern AI tooling and prompt engineering, with a strong passion for building modern, scalable, AI-powered systems. You can check out my most recent work [here](#).

Skills

Frontend: JavaScript (ES6+), React.js, React Native, HTML5, CSS3, Material UI

Backend: Node.js, Express, PostgreSQL

Version Control & DevOps: Git, GitHub, Docker

AI & Automation: n8n, Claude, Cursor, Python

Experience

Umuzi

Web developer | Feb '25 Jan '26

- Fixed bugs and added new features using **React (MUI, Redux) and PostgreSQL**
- Engaged in reciprocal **code review** processes, providing constructive feedback to peers to resolve blockers while leveraging senior feedback to accelerate code quality and personal technical growth.
- Participated in **daily and weekly standups** to provide progress updates, collaborate on roadblocks, and manage ticket assignments.

Marketing Fridays

Web developer | Jul '24 Aug '25

- Collaborated directly with the company owner from the design phase through to deployment to revamp the core platform using **PHP, HTML, CSS, and SQL**.
- Designed and developed a custom **Content Management System (CMS)** dashboard from scratch, empowering the business owner to execute full CRUD operations on events data without requiring coding knowledge.
- Optimized website performance by migrating media assets to external cloud storage and streamlining UI animations, successfully reducing page load times from **7+ seconds to under a second**.

Outlier, Online

AI prompt engineer | Oct '24 Feb '25

- Engineered prompts for a variety of **AI models**.
 - Refined AI model functionality through **strategic prompt engineering**, implementing Python and NLP tools to facilitate error detection and ensure more accurate model responses.
 - Evaluated and enhanced the selection of over 1000 model responses leveraging **Python and A/B testing methodologies**, enabling global teams to deliver superior outcomes across multiple projects.
-

Education

Umuzi

IT (Systems development) | Aug '23 Aug '24

- Learned the basics of software and systems development and built Vanilla JS projects utilising PostgreSQL and expressJS for back-end logic and HTML, CSS, Javascript for Front end.
